

North Hill Systems

Complete Streaming Setup Guide

This guide will walk you through setting up your North Hill Systems streaming service on your preferred device. We recommend **TiviMate** for Firestick and Android devices and **TiviMax** for Apple TV — both deliver an exceptional live TV experience. For iPhone and iPad we recommend **IPTV Smarters Pro**. Any app that supports **Xtream Codes** login will work — the setup process is the same.

YOUR CREDENTIALS

SERVER URL	USERNAME	PASSWORD

Firestick & Android TV — TiviMate

TiviMate is the top-rated IPTV player for Firestick and Android TV. It features a clean TV guide layout, favorites management, EPG, picture-in-picture, and recording support.

Download TiviMate

From your Firestick or Android TV home screen, open the **App Store** (Amazon) or **Google Play Store** (Android TV) and search for **TiviMate IPTV Player**. Install the free version. A **TiviMate Companion** subscription unlocks advanced features including multiple playlists, recordings, and parental controls — available as an in-app purchase.

■ ■ TiviMate is available free. The Companion subscription unlocks premium features for a one-time or annual fee — entirely optional to get started.

Add Your Playlist via Xtream Codes

STEP 01

Open TiviMate

Launch TiviMate from your home screen or app drawer.

STEP 02

Select Add Playlist

On the welcome screen tap Add Playlist. If you have used the app before, go to Settings > Playlists > Add Playlist.

STEP 03

Choose Xstream Codes Login

Select Xstream Codes login from the three options presented.

STEP 04

Enter Your Credentials

Fill in your Server URL, Username, and Password exactly as provided. Both are case sensitive.

STEP 05

Load Channels

Tap Add. TiviMate will connect and begin downloading your channel list and EPG. The first load may take 1–3 minutes with 15,800+ channels loading. Wait for the progress bar to complete.

STEP 06

Start Watching

Your channel categories will appear on the home screen. Browse by group, use the search function, or open the TV Guide (EPG) to see what is on now and schedule viewing.

Key TiviMate Features

FEATURE	DESCRIPTION
TV Guide (EPG)	Press the Menu button on your remote from any channel to open the full EPG. Browse upcoming programs, set reminders, and schedule recordings.
Favorites	Long-press Select on any channel and choose Add to Favorites. Navigate exclusively through favorites using the scroll buttons for a personal channel lineup.
Groups / Categories	Open the TV Guide and press Menu > Group Options > Manage Groups to hide or reorder your channel categories. Remove any groups you don't use.
Picture in Picture	While watching fullscreen, select the PIP option to keep your stream playing while using other apps on your device.
EPG Setup	Settings > EPG: Set Past Days to 1, Update Interval to 24 hours, Update on Playlist Change to On. This keeps your guide accurate without slowing the app.
Parental Controls	Settings > Parental Controls: Set a PIN to restrict access to playlists, groups, or specific channels. Ideal for family households.
Subtitles	While watching, long-press Select on your remote, choose CC, and switch from Off to Closed Captions 1. Availability varies by channel.
Audio Sync	If audio and video don't match, press Select while watching and adjust the Audio Offset up or down until they align.
External Player	After selecting a channel, choose Open in External Player to use VLC or MX Player instead of the built-in player.
Recordings	Long-press Select on any EPG entry to schedule a recording. Requires a USB drive formatted as FAT32 connected to your device.

Firestick Remote Navigation

BUTTON	ACTION
Select	Open channel / Show channel options while playing
Back	Return to TV Guide / Show channel groups
Left / Right	Scroll through previous / next programs in EPG
Up / Down	Scroll up and down through channels
Rewind	Scroll channels up without changing channel
Fast Forward	Scroll channels down without changing channel

Android Phone & Tablet — TiviMate

TiviMate works on Android phones and tablets as well as Firestick and Android TV. The setup process is identical — download from the Google Play Store and follow the same Xstream Codes login steps above. The interface adapts to your screen size automatically.

■■ On Android phones, TiviMate works best in landscape orientation. The TV guide and channel browser are optimized for horizontal viewing.

Download:

Open **Google Play Store** on your Android device and search for **TiviMate IPTV Player**. Install and follow the same Xstream Codes login steps from the Firestick section above.

iPhone & iPad — IPTV Smarters Pro

TiviMate is not available on iOS. We recommend **IPTV Smarters Pro** for iPhone and iPad — it supports Xstream Codes login and provides a clean, reliable streaming experience on Apple devices.

Download IPTV Smarters Pro

Open the **App Store** on your iPhone or iPad. Search for **IPTV Smarters Pro**. Download and install — it is free with optional in-app features.

Add Your Playlist

STEP 01

Open IPTV Smarters Pro

Launch the app after installation.

STEP 02

Select Login with Xstream Codes

On the home screen tap Add User then choose Login with Xstream Codes API.

STEP 03

Enter Your Details

Fill in a name for your profile (e.g. North Hill), then enter your Server URL, Username, and Password.

STEP 04

Tap Add User

The app will connect and load your channels, VOD library, and EPG. First load may take a minute.

STEP 05

Browse and Watch

Select your profile from the home screen. Browse Live TV, Movies, Series, or use search to find content.

■■ IPTV Smarters Pro may appear as a paid app in some regions. If unavailable, search for GSE Smart IPTV — it uses the same Xstream Codes login and works equally well on iOS.

Apple TV — TiviMax

For Apple TV we recommend **TiviMax** — a dedicated IPTV player built specifically for tvOS that delivers an experience similar to TiviMate. It supports Xstream Codes login and provides a full TV guide, EPG, and favorites management optimized for the Apple TV remote.

Download TiviMax

On your Apple TV, open the **App Store**. Search for **TiviMax** and install it.

Add Your Playlist

STEP 01

Open TiviMax

Launch TiviMax from your Apple TV home screen.

STEP 02

Add a New Playlist

Navigate to Settings then select Playlists and tap Add Playlist.

STEP 03

Select Xstream Codes

Choose Xstream Codes as the playlist type.

STEP 04

Enter Your Credentials

Enter your Server URL, Username, and Password. Use the Apple TV on-screen keyboard or the Remote app on your iPhone for faster input.

STEP 05

Load and Watch

Save and allow TiviMax to load your channels and EPG. Once complete, browse your full channel lineup from the home screen.

■ ■ Tip: Use the Remote app on your iPhone (Control Center > Apple TV Remote) to type your credentials faster on Apple TV — much easier than the on-screen keyboard.

Troubleshooting

ISSUE	SOLUTION
Channels not loading	Check your internet speed (minimum 10 Mbps recommended per stream). Remove and re-add your playlist.

Wrong credentials error	Username and password are case sensitive. Copy and paste directly from your welcome email.
Buffering or freezing	Test your internet speed. Use a wired ethernet connection if possible. Try a different channel to isolate the issue.
EPG / Guide not showing	Go to app settings and select Update EPG or Refresh Guide. Allow up to 5 minutes to fully reload.
App won't connect	Confirm your Server URL includes the port number (e.g. :8080). Remove any trailing slash at the end of the URL.
No sound on a channel	Press Select / OK while watching and check the audio track options. Some channels carry multiple audio tracks.
Audio out of sync with video	In TiviMate, press Select while watching and adjust the Audio Offset. Increase or decrease until audio matches.
App crashes on load	Delete and reinstall the app. Make sure your device firmware and the app are both fully updated.

■■ **IMPORTANT:** Beware of websites claiming to offer TiviMate IPTV subscriptions or content. TiviMate and TiviMax are video player apps only — they do not provide any channels or content. Your content comes exclusively from North Hill Systems using your credentials above. Never enter payment information on third-party sites claiming to offer TiviMate streaming.

Using a different app? Any IPTV player that supports Xstream Codes login will work with your North Hill Systems service. Popular alternatives include GSE Smart IPTV, Perfect Player, and IPTV Smarters on various platforms. Find the Xstream Codes, M3U, or API login option in your app and enter your Server URL, Username, and Password — the setup is the same regardless of which player you use.
